

**FOR IMMEDIATE RELEASE**

April 10, 2020

Consew, the leading manufacturer of industrial sewing machines for heavy industrial use, announces it's participation in the CDC recommendation for cloth face covering (<https://tinyurl.com/wmf2tk6>). According to newly released information and reported on the CDC website, "In light of this new evidence, CDC recommends wearing cloth face coverings in public settings where other social distancing measures are difficult to maintain (e.g., grocery stores and pharmacies) **especially** in areas of significant community-based transmission."

Consew is fully committed to this effort and under essential business emergency guidelines is accepting orders for various types of industrial sewing machines and attachments which can produce these products in a minimal time with little training.

Most of the masks and other PPE (personal protective equipment) made by individuals and small companies are produced with standard single needle sewing machines. These are inexpensive and easy to train. To produce a little faster, a user can opt for an automatic type machine for not much more investment. Some users, who are sewing heavier material have chosen our standard and automatic type walking foot machines. Other equipment being used are overlock machines and various types of manual cutting machines. At Consew, we are making everything easy, we can even help those needing patterns the resources to find them free. The goal here is to produce all the PPE products quickly and help medical providers and individuals stay safe. Whether you want to produce face masks, uniforms, mops, covers or anything helping to prevent the spread of Covid-19, quality made, industrial sewing machines are essential.
